

Growth Clinic's System

Helping individuals and businesses
grow with community

What is Growth Clinic?

Growth Clinic is a community-led incubator and accelerator for individuals, businesses and the communities they create.

The World is Changing

The way we interact with the internet is also changing. Most people use the internet via online communities. They shop on Instagram, learn on WhatsApp, get product support on Telegram and Discord and engage on Twitter and Discourse.

Traditional methods of growing are becoming obsolete in this new world.

To market your work, product or service, you need to connect with your users. To build this connection, you need to establish community. Not as a place but as a state of mind.

Your customers become people who
connect with your product or service,
not just pay for it

What is a Community?

A community is a group of *people* with *shared* interests and shared goals.

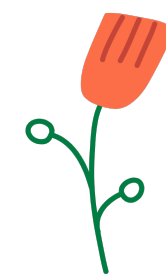

This means that with a shared goal communities can grow beyond shared interests.

They can commit to shared goals, solve shared pain points and create shared economy.

In this shared economy, as the *individuals* grow, the community grows. They grow by learning.

Learning is central in how a country or an economy grows, it is central in defining what can be created.

Community Progression

Community

People with shared goals and pain points come together to learn and create.

STEP 1

Shared Economy

Building and creating for themselves, they conceive their own shared wealth.

STEP 2

Ecosystem

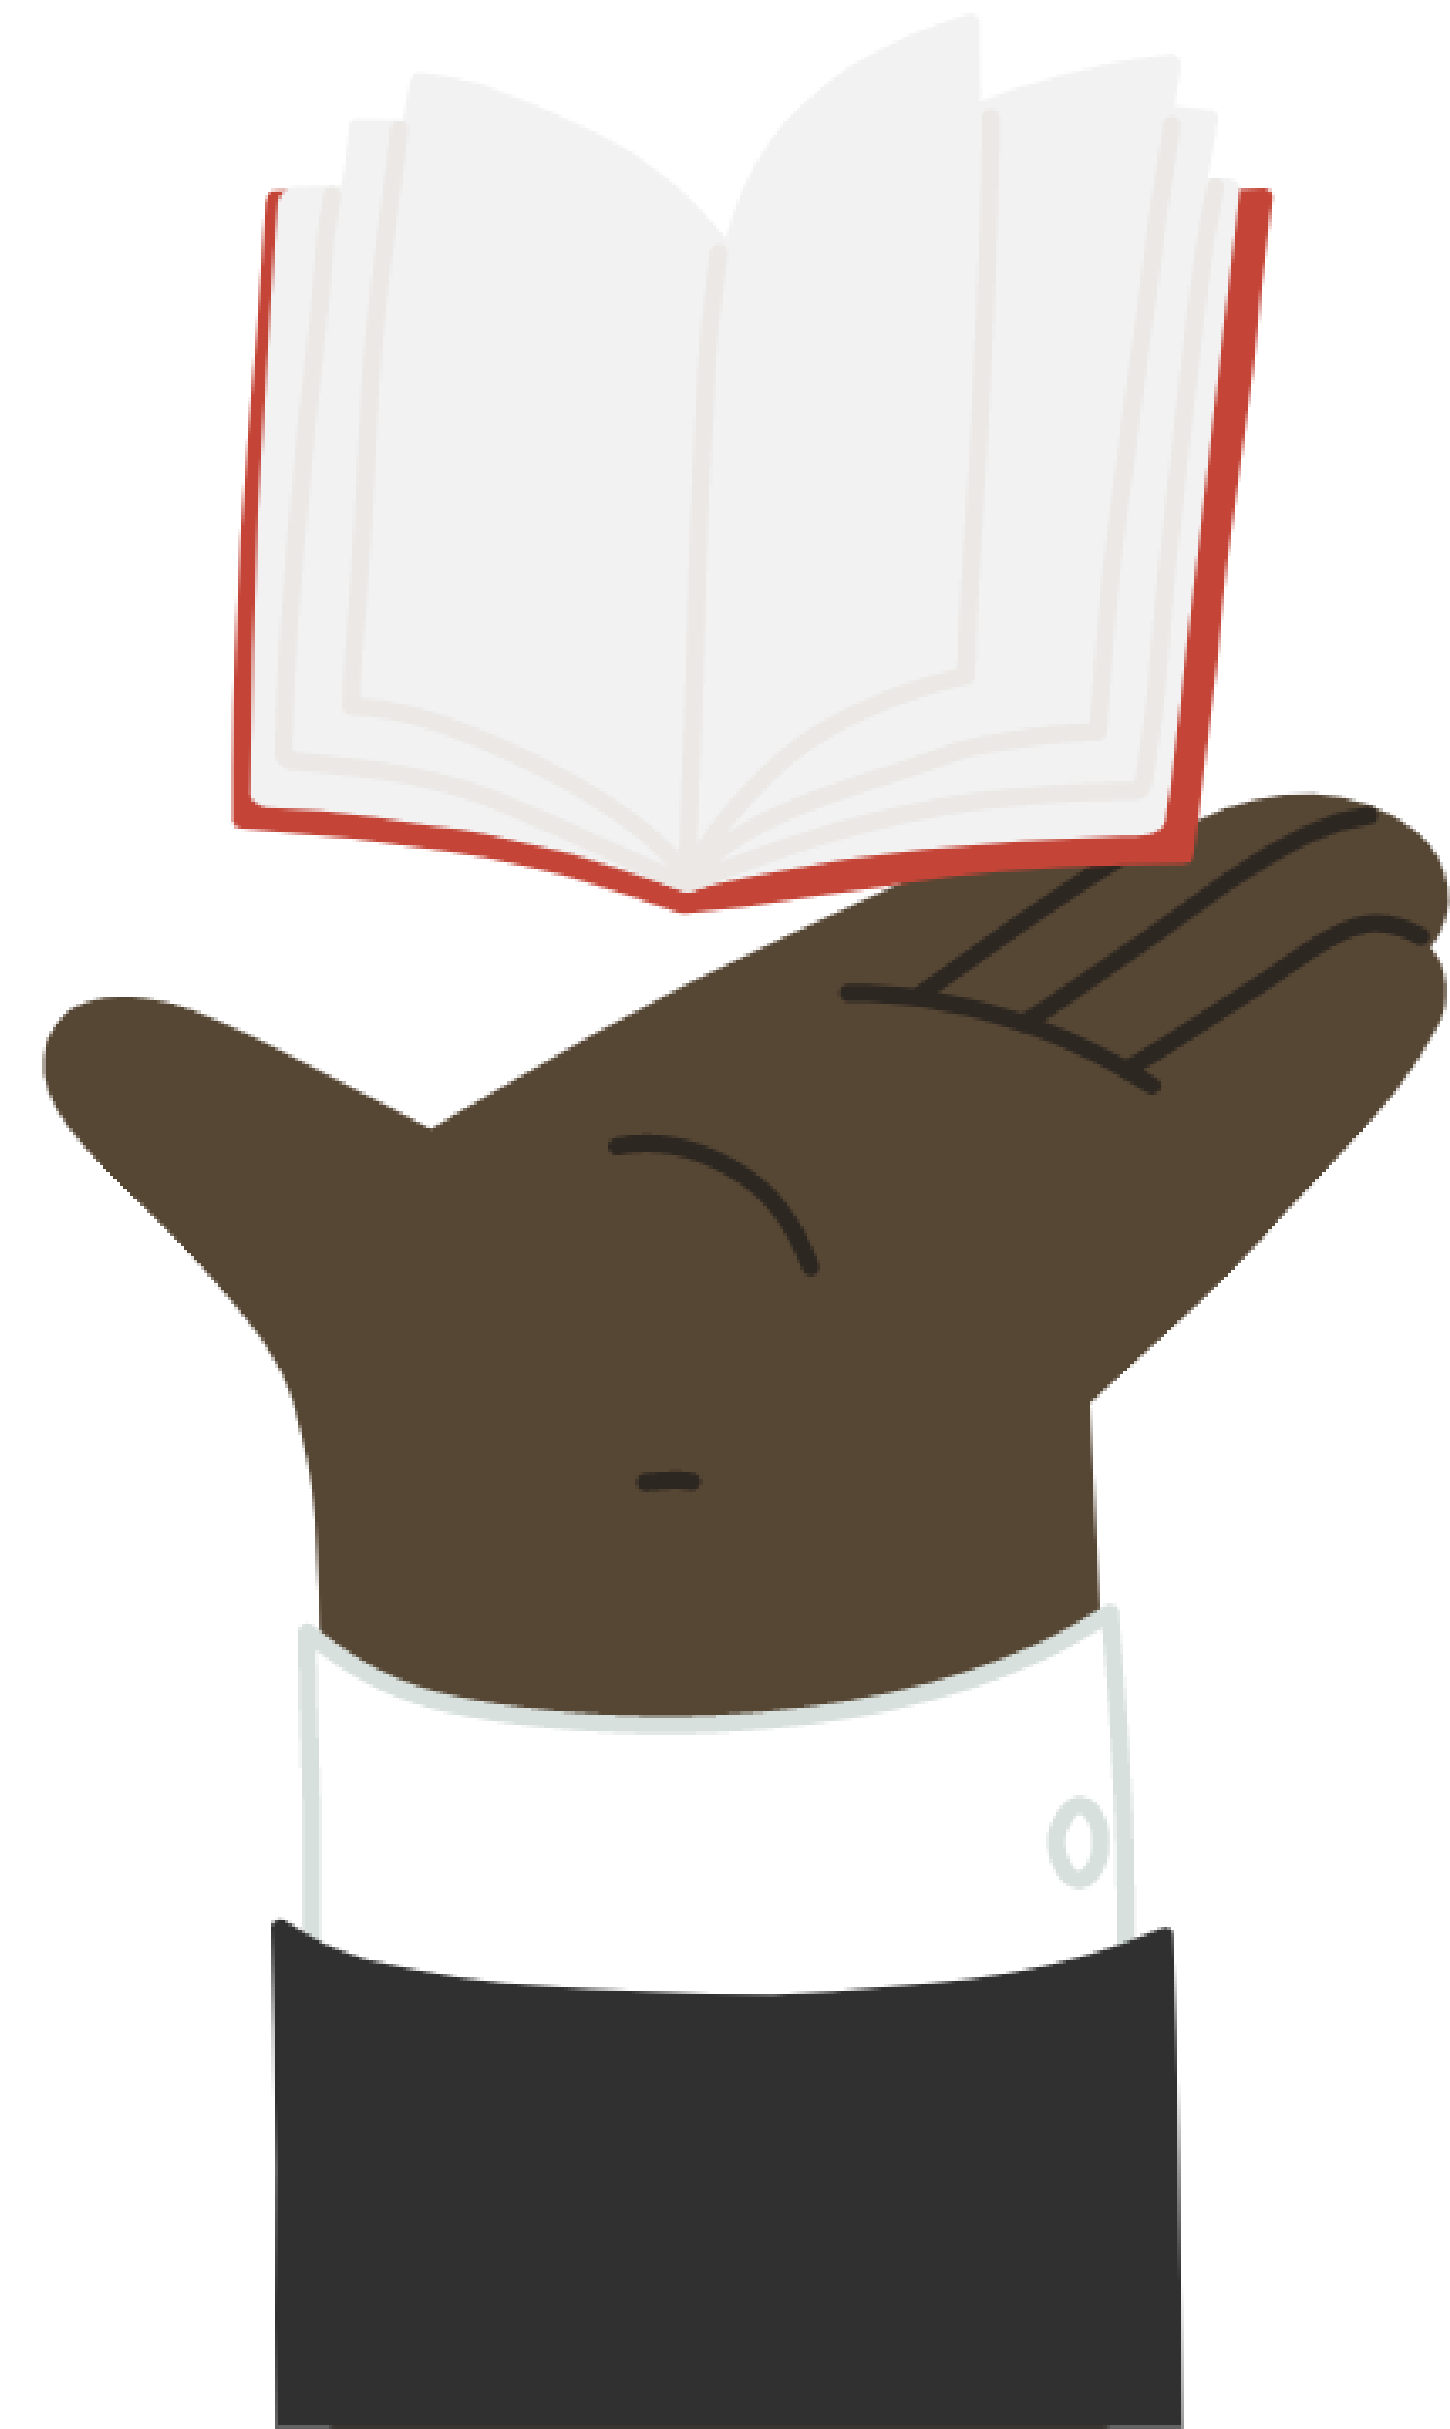

The shared economy enables others around this community to grow and partake in the shared wealth, thereby starting a self-sustaining growth loop.

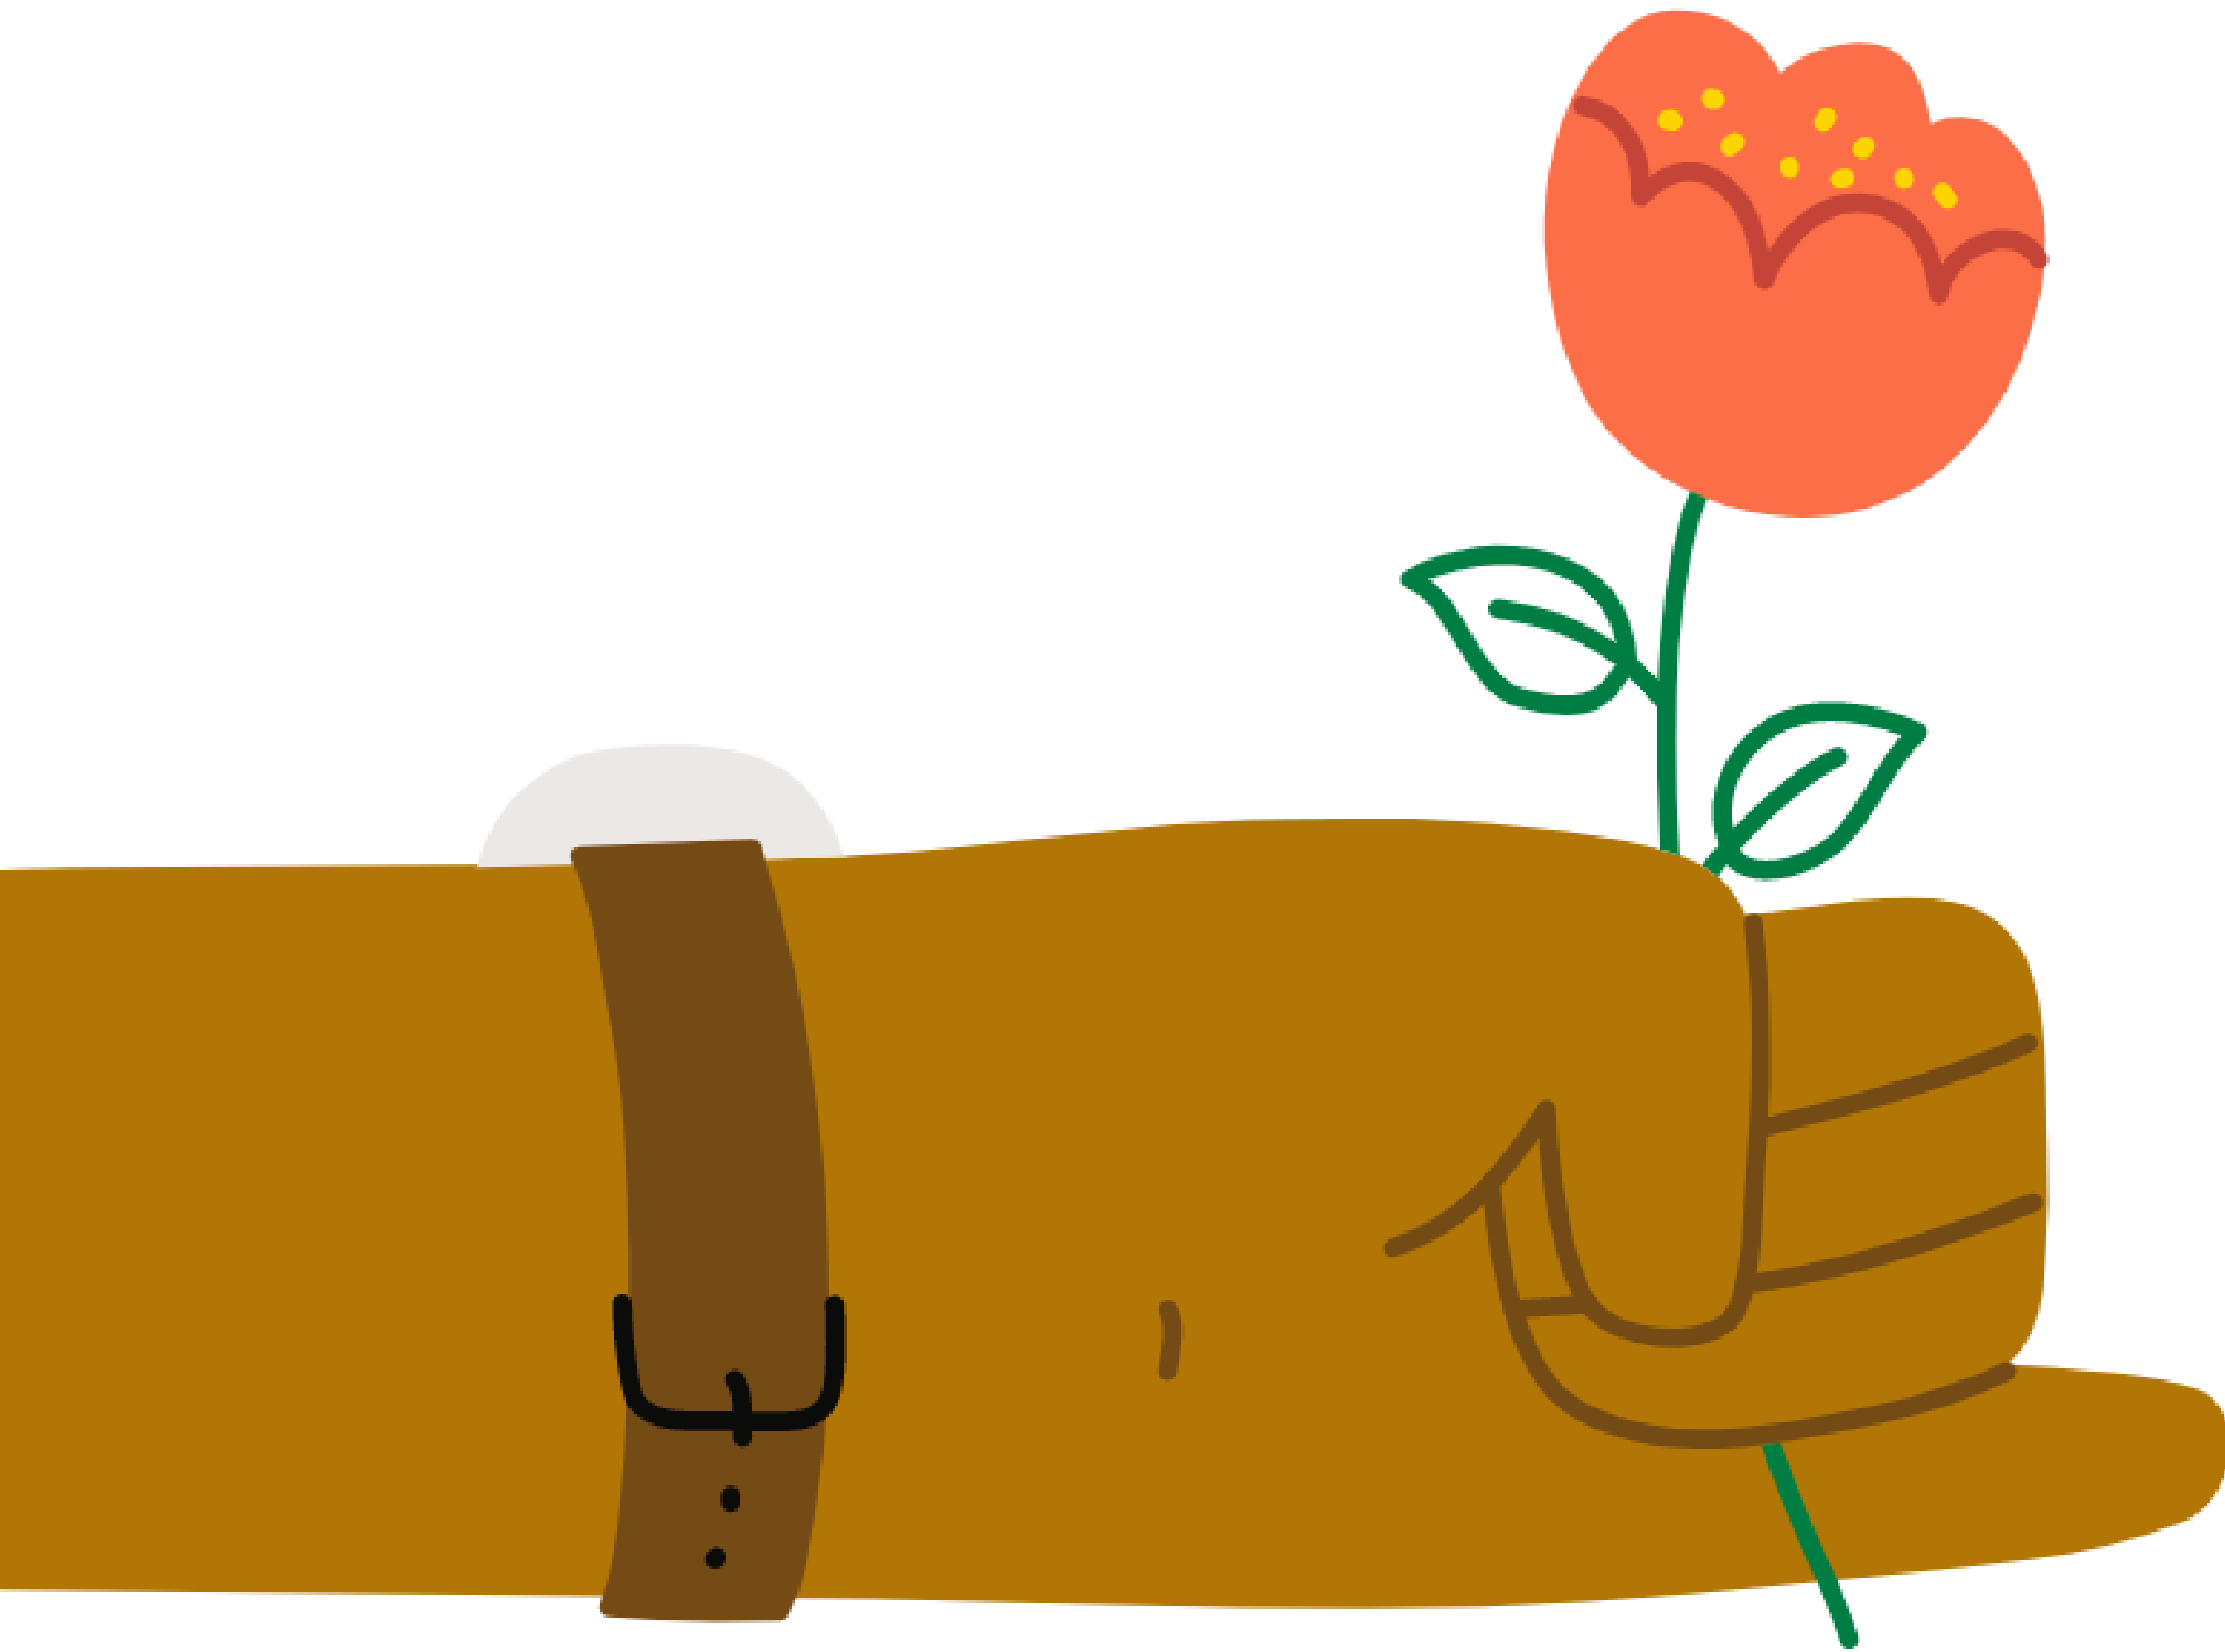

STEP 3

As we enable the community to share, new ideas are built on the old. This sharing leads to innovation.

Here innovation does not only solve shared pain points, it creates new markets off of the community. It also creates new products and services from the community.

An enabled community can:

- Create social impact solutions to shared pain points in the community.
- Improve on and monetise the solutions using proven frameworks to create scalable and investable products and services.
- Learn and profit as they build products and services from these solutions.

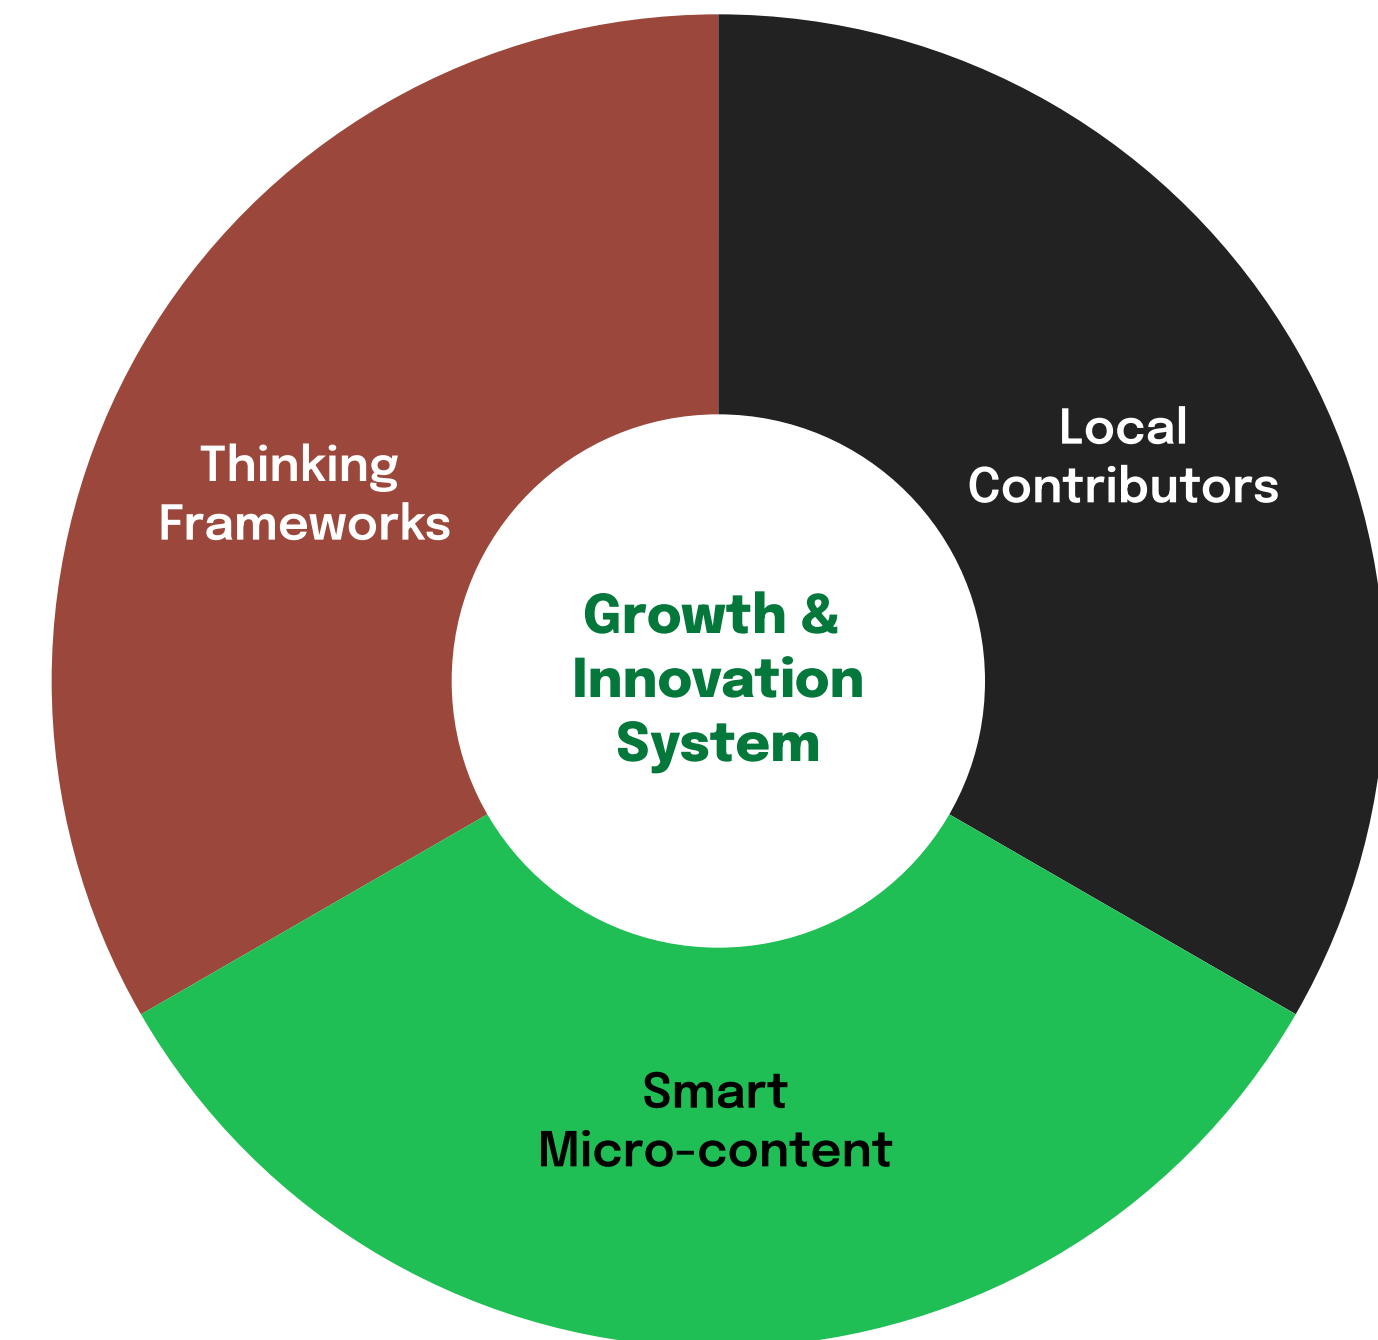

All of these are possible via a system of coordinated learning and sharing.

We call this system our
Growth and Innovation System.

The Growth and Innovation system

The Growth and Innovation System (GIS) is a process that facilitates skill and resource crowdsourcing to enable communities to solve their problems themselves while creating community wealth or prosperity.

The GIS expanded:

Thinking Frameworks

- Design Thinking
- Project Thinking
- Market Thinking
- And more...

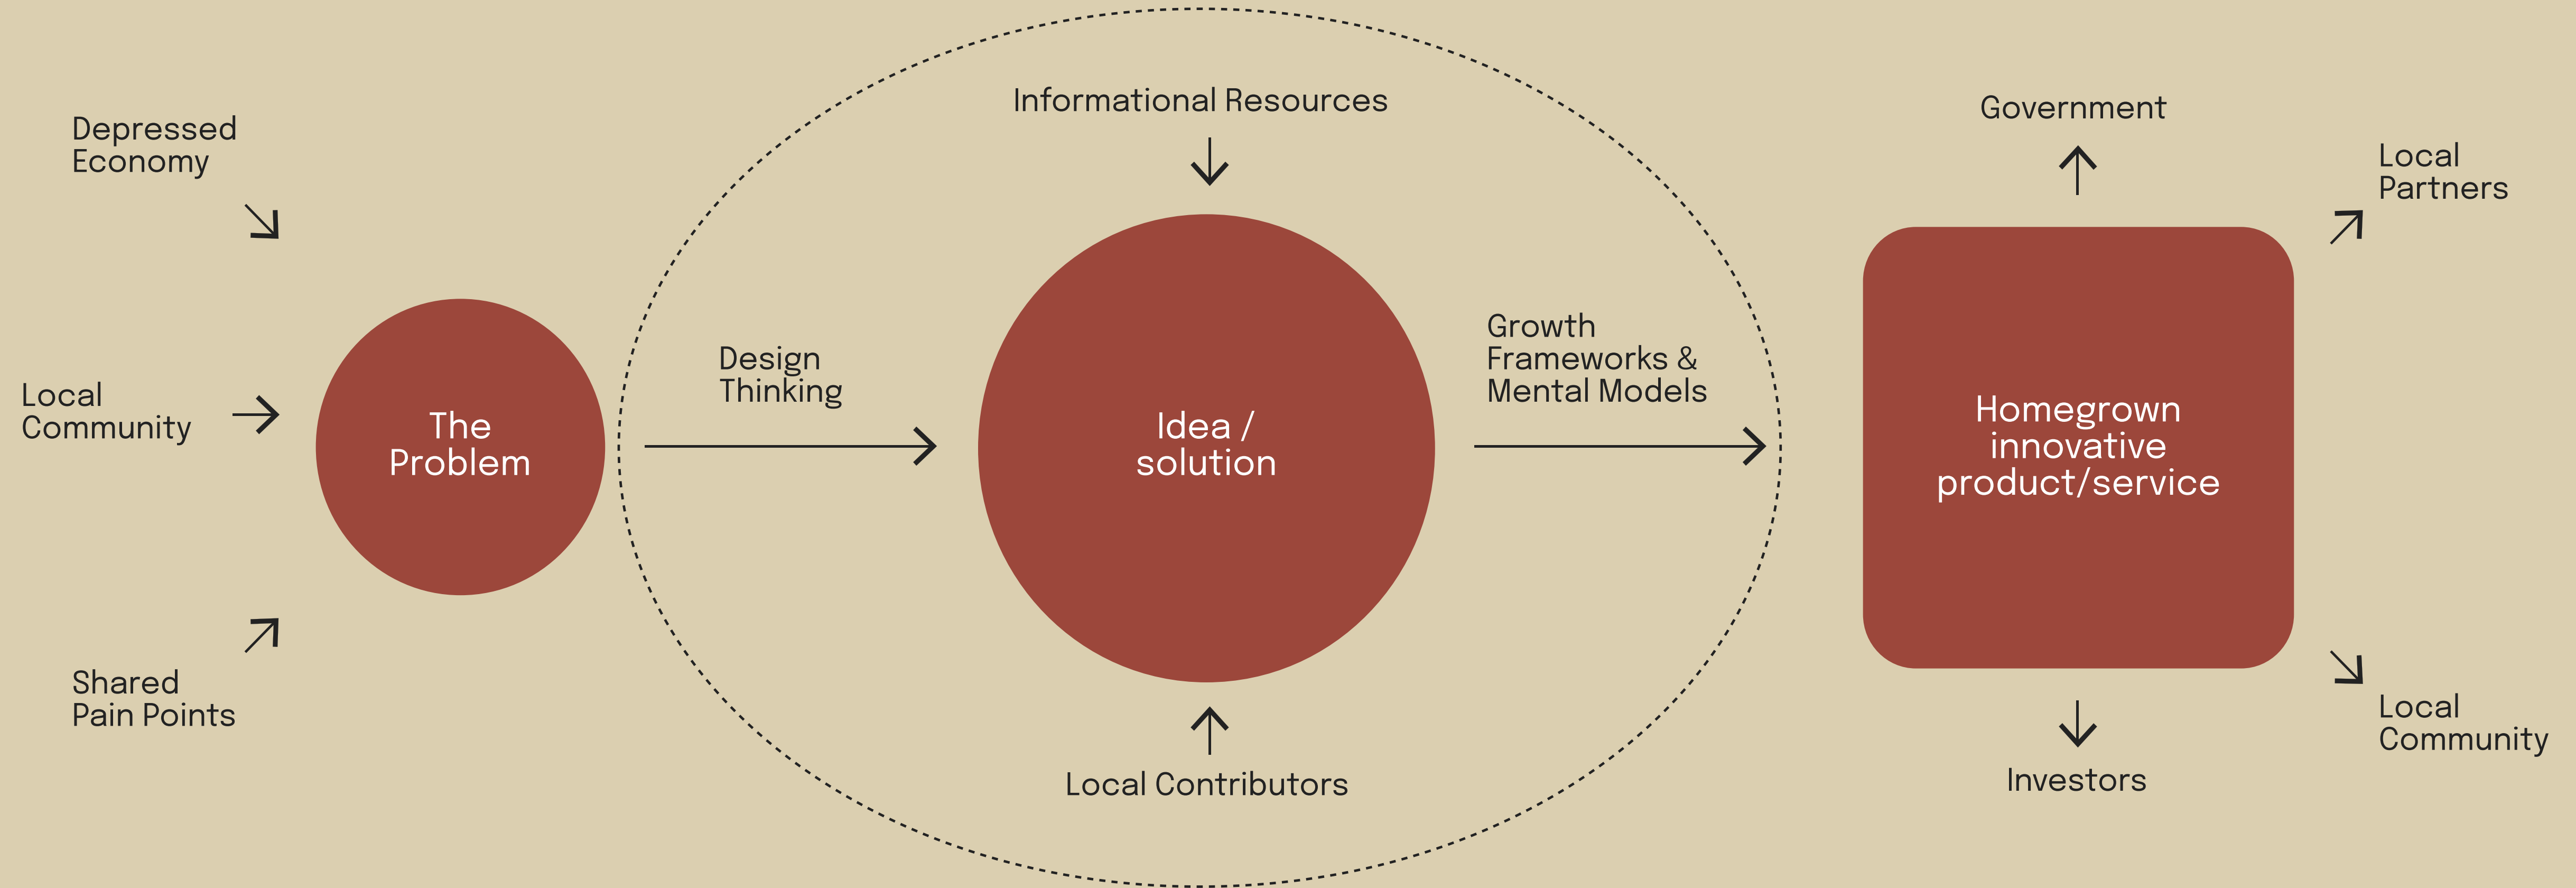

Local Contributors

- Local community
- Local Knowledge & Culture
- Local Partners

Smart Micro-content

- Bite-sized tasks from real world projects/problems
- Summarised guides from open online resources

The Growth and Innovation System Detailed

Local Contributors

- Local Community
- Individuals (learners ...)
- Volunteers (Mentors, Guides ...)
- Sponsors & Local Partners
- Investors & Government

Informational Resources

- Local Knowledge and Culture
- Open Online Resources
- Smart Micro-content

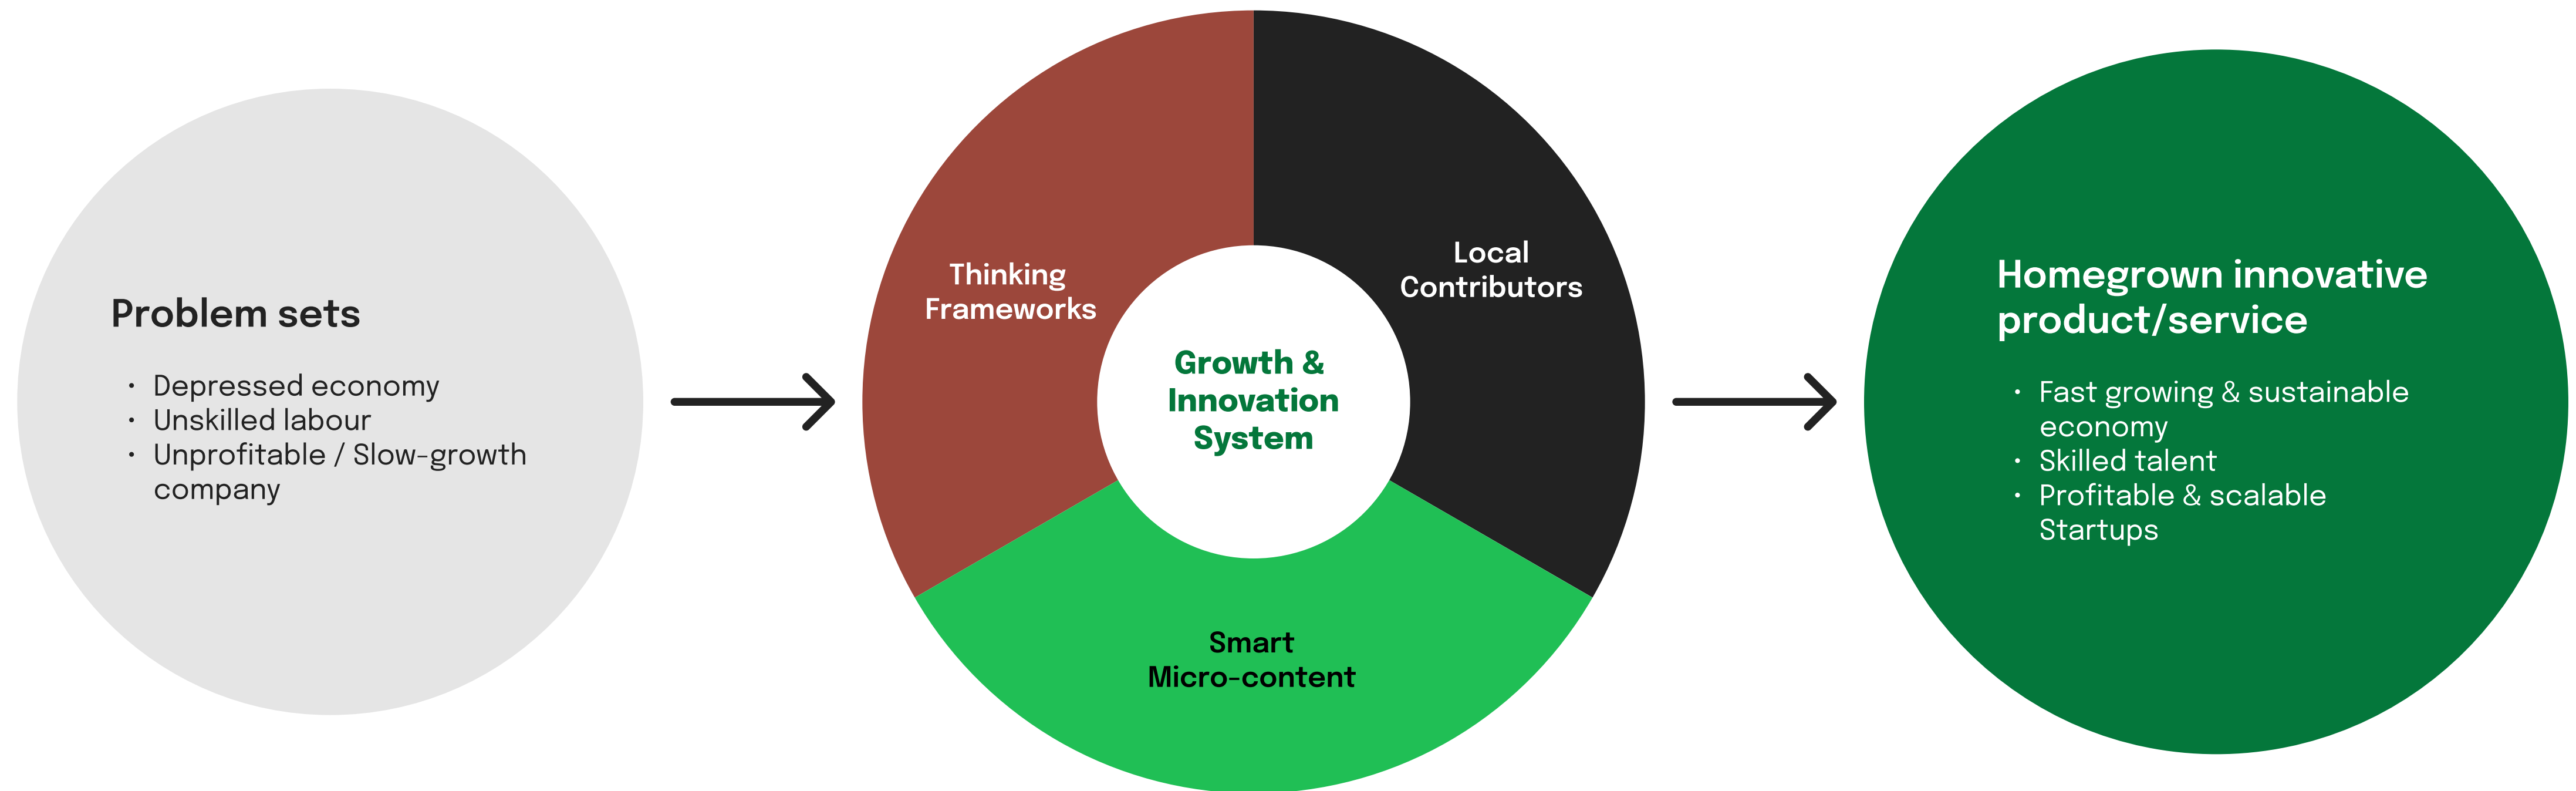

Growth Frameworks & Mental Models

- Market Thinking
- User Thinking
- Business Thinking
- Project Thinking
- And more ...

With the Growth and innovation system we can:

- Create profitable businesses out of problems.
- Learn new skills faster
- Grow our communities
- Create self-sustaining economies and ecosystems

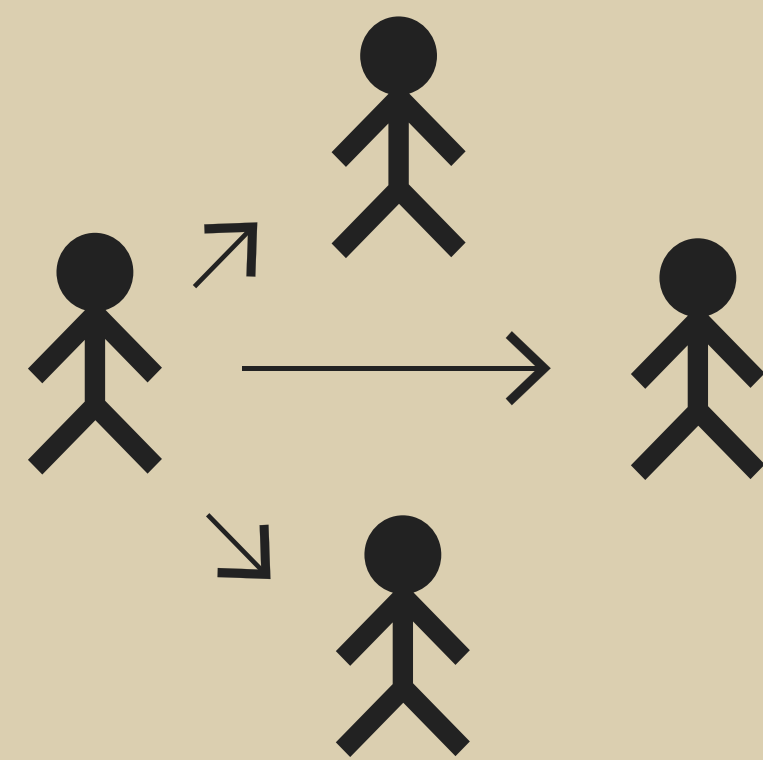

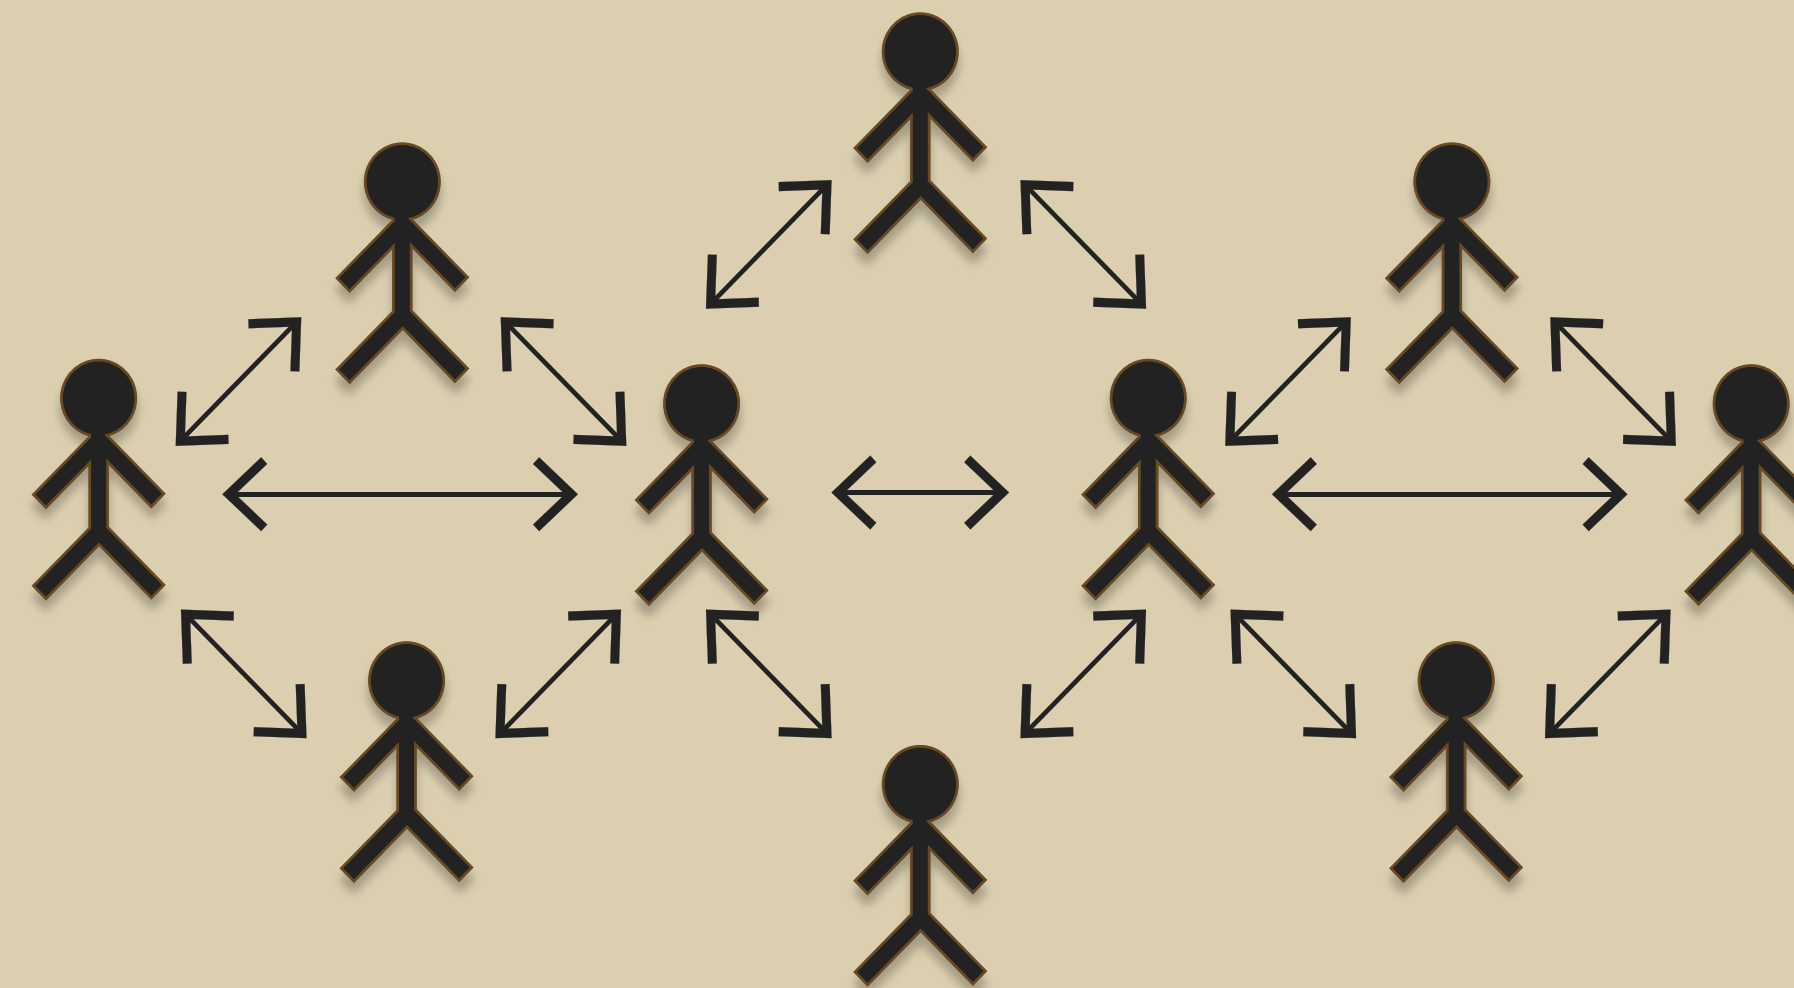

Problem sets are examined through the GIS and they become Homegrown innovative products and services

Innovation, Research, Ideation, Learning, Growth always happened on a one-one or one-few relationship/connection.

Imagine, if now, it could happen on a many-many relationship/connection. Like a distributed mesh network. This would improve innovation, research, ideation, learning, and growth exponentially.

One - One
/One - Few

Many - Many
Distributed Mesh Network
