

Growth Clinic: Enabling Shared Prosperity

By Osioke “Sprime” Itseuwa

What is Growth Clinic?

Growth Clinic is a platform designed to crowdsource Nigeria's ingenuity to solve our challenges locally while enabling shared prosperity.

Using our in-house growth and innovation system, we **build sustainable social impact businesses to help individuals learn** while solving a shared problem in their local communities.

Individuals **own a piece of the business as they build it to grow their skills**, and they earn from the business as it grows and improves their community, thereby creating shared prosperity.

How does the Growth and Innovation
System work?

How the Growth and Innovation System Works

1. Learners pick a pressing problem in their local community,
2. They ideate a solution using a modified design thinking process,
3. And working with feedback and local knowledge from the community members, they develop the solution into a sustainable business using tested mental models and frameworks.

The learners become skilled talents while building the business in cohorts or they get hired. Either way they get earned or capital income, which improves the economy and creates shared prosperity.

The Growth and Innovation System

Local Contributors

- Local Community
- Individuals (learners ...)
- Volunteers (Mentors, Guides ...)
- Sponsors & Local Partners
- Investors & Government

Informational Resources

- Local Knowledge and Culture
- Open Online Resources
- Smart Micro-content

Growth Frameworks & Mental Models

Startups

Innovation, Research, Ideation, Learning,
always happened on a one-one or one-few
relationship/connection.

Imagine, if now, it could happen on a many-many
relationship/connection. Like a mesh network.
A distributed mesh network.

One - One
/One - Few

Many - Many
Distributed Mesh Network

Growth Clinic in the real world: Owmi Case Study

In our alpha growth cohort, learners wanted to learn how to create scalable products as Growth Product Managers.

Using the Growth Clinic system, they created Owmi to solve access to drinkable water in urban areas in Lagos, Nigeria. They did this while learning.

Owmi: Connecting Stay-Home Individuals To Clean Water Spots

Project by Benita Bulley and Tsado Gregory.
Facilitated by Osioke “Sprime” Itseuwa

Powered by Growth Clinic

The Problem

We asked stay-home individuals about their experience accessing clean water to drink, cook and to do other domestic activities.

The names and images used to represent the people we spoke to have been changed to preserve their privacy.

The Problem

"What has been your experience with accessing clean water at home?"

Nnenna 26,
Festac, Lagos,
Nigeria

Moses 27,
Victoria Island, Lagos,
Nigeria

Gloria 30,
Satellite Town, Lagos,
Nigeria

"When there is no power we cannot pump clean water at home, and the water we buy from neighbours has a funny taste and is coloured. We cannot drink it or use it to cook."

We always have to buy water because when we pump water it isn't clean. And buying water it is expensive. We keep talking to our landlord to treat the pumped water but no response.

"We have our own borehole for pumping clean water, but we still have to buy cold drinkable water from stores outside. It is stressful having to go every time, someone bringing cold water to the house would be bae!"

The Problem

"What has been your experience with accessing clean water at home?"

John, 28,
Bissam, Airport Road, Lagos,
Nigeria

We have to buy 3 bags of pure water every day to get drinkable and cook-able water. It is costly.

Paul 27,
Ikeja, Lagos,
Nigeria

To get water to do anything at home, we buy 3 25 Litre Jerry Cans every day. They finish daily as we use them to bathe and cook.

The Problem:

Getting drinkable water in Lagos, Nigeria is expensive, tedious and unhealthy!

Status Quo:

- Without access to power, it is hard to pump clean water domestically.
- There is no guarantee that water bought from water vendors is clean.
- Buying water daily from trusted water vendors close to home is tedious.

A close-up photograph of a person's hand, wearing a dark sleeve, pointing with their index finger at a document on a table. A pen lies on the table near the hand. The background is blurred, showing some bokeh lights.

The solution

Owmi is a multi-channel platform that distributes and increases access to safe drinkable water by connecting stay-home individuals to affordable nearby trusted neighborhood water spots.

Basically, an on-demand clean drinkable water delivery and water treatment service using a location based chat bot and app.

What does Owmi help homeowners do?

1. With Owmi, users can request for free water tests
2. Users can set up and manage neighborhood treated water points where they can earn some extra income
3. Users can find nearby water spots nearby based on their location for free using Owmi.
4. Nearby households can request for water at the push of a button or by chatting with the Owmi bot.
5. To get their water treated and taps maintained, users pay a small fee on the platform.
6. Neighborhood businesses can also serve as water spots to increase traffic to their stores thereby increasing business profit.

An aerial photograph of the New York City skyline at dusk. The sky is a mix of dark blue and orange, with scattered clouds. The city lights are visible, and the Empire State Building stands out prominently in the center. The title 'Owmi's Business Model' is overlaid in white text across the middle of the image.

Owmi's Business Model

Key Partners  Water treatment vendors/companies Neighbourhood Residential and Business Associations Water selling points in the area	Key Activities  App development Partnerships Delivery service set up Marketing Key Resources  Human resources (App developers, delivery individuals) Water testing, treatment and installation materials Association partnerships	Value Propositions  Certified clean water deliveries in minutes Access to inexpensive water treatment solutions Extra income Water usage monitor and tracker to reduce water waste	Customer Relationships  Personalized service Dedicated customer support Access to curated freebies and discounts from neighborhood businesses Channels  Print (handbills and banners with links to bot) App and bot Neighborhood Businesses and Community Associations Water Treatment and Vendor Associations	Customer Segments  Individuals who stay/work from home Homeowners
Cost Structure  Human resources Partnerships and customer acquisition costs Water testing, treatment and installation materials			Revenue Streams  Service fee for installation, water treatment and maintenance Service fee for water deliveries and percentage of water sales from stores. Ad placement at partner water spots	

Why Owmi?

- Users can access clean drinkable water within short distances
- Users don't have to step out of home, clean drinkable water can now come to them
- Users can trust Owmi spots as every waterspot owner is verified
- Owmi is affordable in comparison to the pure water and plastic bottle water sold in shops
- Owmi is eco-friendly and has a mission to reduce plastic waste one water spot at a time
- Users can schedule free water tests and track their water consumption to reduce water waste
- For water spot owners, Owmi provides them the opportunity to make extra income and for businesses, pull walk-in traffic.

Owmi is currently being built out and the apps are being developed by learners.

The Market

According to the National Universities Commission (NUC), in 2017 there were 1.7million students in Nigerian universities and 250,000+ join the labour force. [link](#)

Individuals in this market segment pay for or get sponsored to attend learning programs. The programs start from 25,000 NGN per person but can go as low as 8,500 NGN for large groups.

Companies pay 20% to 30% of the talent/consultant salary/fee when they hire.

The Team

Currently a team of 1, Osioke “Sprime” Itseuwa has facilitated learning programs for over 1,000 Nigerians over the last 2 years through Frintern.com which he founded.

Starting afresh, he is working on Growth Clinic now to figure out how to help middle class Nigerians get earned and/or capital income through communities.

He is a self-driven lean community, product and growth manager with over 6 years of experience who enjoys researching consumer habits to build engaging consumer experiences.
